

A.4. User Manual

In this section, the user manual steps for connecting and operating the conveyor belt kit are briefly discussed.

The kit comes with the following components:

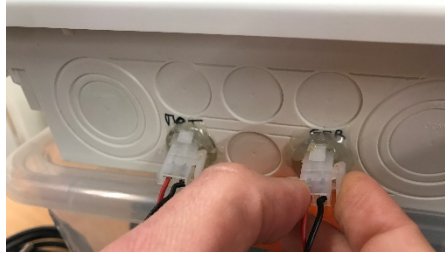

- 1) Power Supply cable;
- 2) Electronic box cable;
- 3) Motor wires;
- 4) Generator wires;
- 5) Electronic box;
- 6) Power Supply;
- 7) Conveyor belt;

The following steps are about how to **turn on** the system safely:

Step 1: Connect the motor wires (3) to the electronic box (5);

Step 2: Connect the generator wires (4) to the electronic box (5);

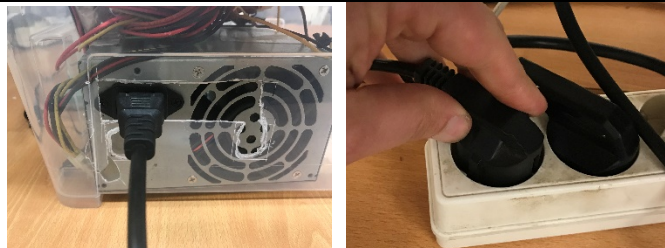

Step 3: By using the electronic box cable (2), connect the Power Supply (6) to the Electronic Box (5);

Step 4: Open the cover of the Electronic Box (5) and verify that Enable is OFF;

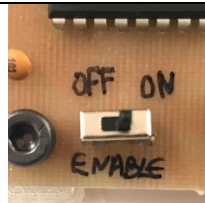

Step 5: Connect the power supply cable (1) to the Power supply (6) and then insert power supply cable in mains socket;

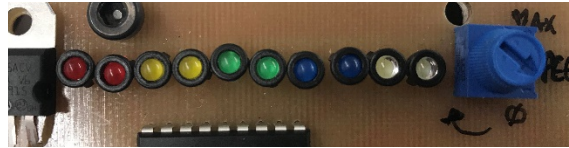

Step 6: Select Direction (Clockwise or Counter clockwise);

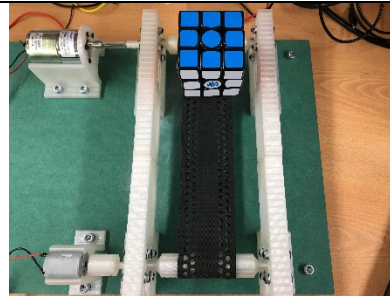

Step 7: Turn On Enable;

Step 8: Regulate blue knob to change speed; the leds should light up accordingly to the selected speed;

Step 9: Place the load at the beginning of the conveyor (7);

Step 10: To change direction, first turn the blue knob to minimum, then change direction and set the desire speed;

After using the product, the kit should be **turned off** correctly, accordingly to the following instructions:

- **Step 1:** Regulate the blue knob to the minimal speed;
- **Step 2:** Turn off Enable;

Step 3: Disconnect power supply cable (1) from socket;
